

SINCHNUT

#68691

The Faucet Nut that Wraps Around the Shank!

Faucet installations just got a whole lot easier! Sinchnuts are a new kind of nut. They're hinged, which allows you to wrap them around the faucet shanks at a high position. No more endless turning like with brass nuts. It also allows you to connect the supply lines *before* you mount your faucet. No more crawling under the sink. Faucet installations are a cinch with Sinchnut!
